

TNAS – Montar disco RAID1 no Windows 11 utilizando WSL

Instale o disco no computador

Abra o Windows Power Shell como administrador

```
wmic diskdrive list brief
```

Pega o path do disco que quer montar

```
wsl --mount \\.\PHYSICALDRIVE0 --bare
```

Abra o WSL

```
apt update
```

```
apt upgrade
```

```
apt install btrfs-progs --
```

```
btrfs device scan
```

```
blkid
```

```
mkdir /mnt/tnas
```

#Instale o Software Raid

```
apt install mdadm
```

```
mdadm --assemble --scan
```

```
cat /proc/mdstat
```

```
apt install lvm2
```

```
apt install fdisk
```

```
fdisk -l
```

```
lvmdiskscan
```

```
lvscan
```

Se aparecer Inactive

```
vgchange -ay
```

```
lvscan
```

```
mount /dev/vg0/lv0 /mnt/tnas
```

```
ll /mnt/tnas
```

Os arquivos estarão lá.
